Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, postnásis, inflammatory bowel diseases, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous Leukemia, cancer, liver disease, Hodgkin's chronic myelogenous Leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic upus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves, Partial Corensic biology, for diagnostic assays, prognostic assays, forensic biology, for diagnostic assays, prognostic assays, corpusptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder associated with aberrant TANGO expression. A wide range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder;
              Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases

XX AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE0136-AAE01513 represent the proteins they encode. C AAE01514-AAE01544 represent human secreted protein fragments or variants. C AAE01514-AAE01544 represent human secreted protein fragments or variants. C The genes and their secreted proteins are useful for preventing, the genes and their secreted proteins, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the therapy. Pathological conditions can be diagnosed by determining the mutations in the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are most highly expressed, c and include developining products for the diagnosis or treatment of proliferative disorders, diseases of the immune system, about of allegases (e.g., rheumatoid arthritis), inflammation, allegases (e.g., rheumatoid arthritis), inflammation, as the disorders, organizeders, schizophrenia, asthma, extinctions disorders, pregnancy-related disorders, end indisorders, pregnancy-related disorders, end indisorders, pregnancy-related disorders, end indisorders, pregnancy related disorders, and can be used to suburn, to maintain organs before transplantation, for supporting c cognate ligands or binding partners, and in chemotraxis, and can be used c cognate ligands or binding partners, and in chemotraxis, and can be used in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked in diagnostic immunosasays e.g., radioimmunosupers or enzyme tinked in diagnostic immunoscipent assay (ELISA). The present sequence represents a human immunoscipent. New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease, parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; endocrine disorder; pregnancy-related disorder; endocrine disorder; lifection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification; chromosome 19. ņ "Mature human secreted protein" Ä Komatsoulis GA, Moore PA, Birse CE, Claim 11; Page 485-486; 562pp; English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel diseases, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune classes e.g. myasthemia gravis, autoimmune diabetes and systemic lipse srythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO phyreptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases

describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 261, TANGO 262, and TANGO 267. The TANGO cellular differentiation modulate cellular spoiliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial estima and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, as isobment heart disease, modulate the proliferation discretts bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to hydrocephalus, brain herniations, iatrogenic disease, inflammations, hydrocephalus, brain herniations, iatrogenic disease, inflammations, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

Created using information provided.
Novel human and murine secreted proteins designated TANGO 216, 261, 266, 266 and 267 useful as modulating agents of cellular processes,
                                                                                                 -; 175pp; English.
                                                   for treating cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        488 AA;

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO Polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular dahesion. The proteins can be used to treat any von Willebrand factor associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation,

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 261, TANGO 262, and TANGO 267. The TANGO 267 closures and be used to modulate cellular adhesion. The polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The disorder, regulate extracellular matrix structuring, cellular adhesion, disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, and cellular interactions, and cellular appear in the bone marrow, and leukocytes, treat bone marrow, blood that appear in the bone marrow, and leukocytes, treat bone marrow, blood cellular interaction or codema, emphysema, chronic bronchitis, bronchiticated diseases and disorders, spleen associated casthma and bronchiectasis, intestinal disorders, spleen associated casthma and bronchiectasis, intestinal disorders, spleen associated conduct function of bone and cartilage cells and to treat bone and cartilage cells and to treat bone and cartilage cells and to treat bone and cartilage cells and to treat disorders associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. Disease, cerebral bacterial and viral meningitis, all the worles are cerebral careted using information provided.
oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  134 ENRQGYRTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIAD 193

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 267, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 267, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 267, TANGO 267, and TANGO 267. The TANGO CC describes can be used to treat any von Willebrand factor-associated cellular differentiation and/or migration. The advancer. The cand cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular dehesion, differentiation, modulate cellular interactions, complate the proliferation, differentiation, and/or function of cells and hematopolatic associated diseases and disorders, such as cancer, and hematopolatic associated diseases and disorders, atelectasis, complexed to recomplate the proliferation, differentiation as technic learned alsorders, intestinal disorders, spleen associated disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, toxplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. They may created using information provided.

Created using information provided.
                                                                            rango 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoletic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; schemic heart disease; rhydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; higheriner's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a murine TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell traficking and/or migration, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematropotetic associated diseases and disorders, atelectasis, pulmonary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the covaries, cerebral ocedma, pydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's brain cancers, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ٠,

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO cestibles TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cecllular describe used to modulate cellular adhesion. modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, cand hematopoietic associated diseases and disorders, spleen associated asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 closed and be used to modulate cellular adhesion. The polypeptides can be used to treat any von Willabrand factor-associated reclular differentiation and/or modulate cellular adhesion. The cellular adhesion. The and cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or infartative disorders, such as cancer, condulate the proliferation of differentiation, and/or function of cells modulate the proliferation, differentiation, and/or function of cells culmonary congestion or ocdems, emphysems, chronic bronchitis, bronchitectasis, intestinal disorders, spleen associated associated disease, modulate renal disorders, treat cardiovascular disorders such disorders associated disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, differentiation, differentiation, differentiation, differentiations, treat disorders associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases, multiple schemic disease, inflammations, toxoplasmosis, parkinson's disease, multiple schemic erebal cartilage change the present sequence does not appear in the specification; it was occaping the present sequence does not appear in the specification; it was created using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NEIYYFVEQLAHKFISPQLRMSFIVFSTRGTTLMKLTEDREQIRQGLEELQKVLPGGDTY

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system coalised neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibhin activity, chemotactic/chemotantic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                     The invention retaced extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, dass, dogs, chickens or sheep. For example, disorders associated with decreased extracellular shears associated with decreased expression of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to treat diseases by gene therapy. The SPS may also be used as DNA probes in diagnostic assays. The SPS may also be used as antigens to produce antibodies and to identify modulators used as antigens to produce antibodies and to identify modulators (agonists and antigonists) of the SPS. The anti (SP) antibodies and antagonists may also be used to down regulate expression and activity of SPS and as disquostic agents for detecting the presence of SPS in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperporoliferative disorders (e.g. cancher's disease) neurological diseases (e.g. Alzheimer's disease, cancher's disease) ardio-'Cerebrovascular disorders (e.g. cardiac arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,
                                                                                                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              254 RVLCSFKINDSVTLNEKPFSVEDTYLLCPAPILKEVGMKAALQVSMNDGLSFISSSVIIT 313

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary trand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence, where the polynucleotide which comprises a 1-end sequence, where the opinionucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynocleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AAH13618 and AAH13633 to AAH13624 and AAH13633 to AAH13632 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   80 MSFIVFSTRGTTLMKLTEDREQIRQGLEELQKVLPGGDTYMHEGFERASEQIYYENRQGY 139

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Collagen alpha I(XII) chain precursor - chicken

Natternate names: fibrochimerin

C; Species: Gallus gallus (chicken)

C; Accession: A40020; A34485; B34485; A28037; S23814; S22254; S28811

R; Yamagata, M.; Yamada, K.M.; Dublet, B.; Van der Rest, M.; Olsen, B.R.
